0617	Town of Mina
0622	Town of Ripley
0607	Town of Clymer
0624	Town of Sherman

REMARKS:

There was a strong urine/ammonia odor upon entering the shelter. Adequate ventilation is necessary to provide a healthy environment and comfortable temperatures to prevent an accumulation of moisture and noxious gases. The ability to control odors in a housing area depends not only on sanitary practices and the number of animals housed, but also on an effective ventilation system. The housing facility and the area immediately surrounding it shall be kept in a clean condition in order to maintain a healthy environment. This is accomplished by removing and destroying agents that are hazardous to animal health and by performing regular sanitation. Cleaning must be done frequently to remove disease hazards, pest infestation, and odors. Manure, urine, uneaten food, shed hair, soiled bedding, and any other organic matter must not accumulate inside animal enclosures and around the housing area. These wastes may need to be removed with scrub brushes, detergents and degreasers. Trash and waste products on the premises must be stored properly in leak proof, covered containers away from housing and food storage areas. This is necessary to minimize the risks of disease transmission, food contamination and vermin. At regular intervals, all stored trash and wastes must be removed from the premises.

REPRESENTATIVE PRESENT FOR INSPECTION: **Kelly Thornton**
 TITLE: **DCO**
