## REMARKS:

All enclosures housing seized dogs must be structurally sound and kept in good repair to keep the dog contained and to protect it from injury. All surfaces within the primary enclosure must be replaced or repaired when worn or damaged. Dirty, rough and absorbent materials protect microorganisms and are difficult to clean, disinfect and deodorize. Damaged areas of kennels must be repaired or replaced to prevent dogs from ingesting any materials that may come loose from chewing and clawing the enclosure.

The housing facility and the area immediately surrounding it shall be kept in a clean condition in order to maintain a healthy environment. This is accomplished by removing and destroying agents that are hazardous to animal health and by performing regular sanitation. Cleaning must be done frequently to remove disease hazards, pest infestation, and odors. Manure, urine, uneaten food, shed hair, soiled bedding, and any other organic matter must not accumulate inside animal enclosures and around the housing area. These wastes may need to be removed with scrub brushes, detergents and degreasers. Trash and waste products on the premises must be stored properly in leak proof, covered containers away from housing and food storage areas. This is necessary to minimize the risks of disease transmission, food contamination and vermin. At regular intervals, all stored trash and wastes must be removed from the premises. Good housekeeping and sanitary practices are essential for rodent and pest control. Empty feed bags, cans and any other garbage must not accumulate on the premises.
